

Environmental Policy of Better, d.o.o.

At Better, we enhance healthcare and care by easing the workload of healthcare professionals and accelerating digital transformation through lifelong data utilisation. Environmental stewardship, energy management, and other sustainable aspects of our operations are integrated into the company's management system. Our environmental and sustainability efforts focus on:

- Monitoring and improving environmental aspects in areas where we have a direct impact on the environment, especially in energy and material consumption.
- Analysing and improving indirect environmental impacts. Through our healthcare system digitisation solutions, we enhance material and energy management. We analyse and improve these aspects in collaboration with clients and other partners.
- Monitoring legislative requirements regarding the environment, other guidelines, and best practices that we commit to fulfilling.
- Principles of responsible environmental management, with an emphasis on preventing negative impacts. We instill these principles in all employees and other partners involved in the development and maintenance of our software solutions.
- Encouraging employee innovation to implement comprehensive solutions that balance environmental, social, and governance aspects.
- We commit to continuously improving our environmental management system in all the aforementioned critical areas.
